

HASS Rubric: Supported Self-Rehoming

What supported self-rehoming data does the organization track?

Beginner

The organization utilizes a partnership with an external technology solution to track rehoming data. This may include rehoming platforms such as Rehome by Adopt-a-Pet, Home-to-Home, GetYourPet, or others. These platforms may directly supply your organization with the data they have collected.

Intermediate

The organization uses its own tracking mechanism to track detailed programmatic information, including direct services provided. These data recording mechanisms **may be** in conjunction with an external rehoming platform data tracking, as outlined in 'beginner'.

Intermediate tracking information may include:

- Contact information (name, phone, address)
- Pet Information (age, sex, size)
- Types of assistance offered by the shelter
- Outcome or resolution

Advanced

The organization uses its own tracking mechanism to track detailed programmatic information, including direct services provided and those requested but unable to fulfill. These data recording mechanisms **may be** in conjunction with self-rehoming platform data tracking.

Advanced tracking information may include:

- Types of assistance the shelter could not provide, but were needed
- **Optional:** The time it takes to self-rehome an animal
- **Optional:** How the owner heard about your organization or the SSR platform
